

Carbon Fiber Wall Repair

Engineered and tested to provide the strongest anchoring system top to bottom.

Over 5,000 hours of ICC-ES lab testing, this code compliant residential system will out-perform the competition. Competitively priced with great customer service and same day shipping.

Top Anchor
PATENTS PENDING

The diagram illustrates a wall repair system. It shows a grey brick wall with several vertical black carbon fiber anchors. A red circle highlights the top anchor, which is a horizontal bar with a hook-like end. Another red circle highlights the base anchor, which is a horizontal bar with a hook-like end. A third red circle highlights the bottom of a vertical anchor. To the right, a white carbon fiber repair patch is shown being applied to the wall with a roller. The patch is a large, irregular shape that follows the contours of the wall. The background shows a wooden ceiling with exposed joists and a cross-section of a floor and foundation.
